Annual Management Report of Fund Performance

For the year ended December 31, 2017

MANAGEMENT REPORT OF FUND PERFORMANCE

WisdomTree Asset Management Canada, Inc. (“WisdomTree”) is pleased to provide you with the Annual Management Report of Fund Performance (“MRFP”) for the WisdomTree Europe Hedged Equity Index ETF (the “ETF”) for the year ended December 31, 2017. The ETF trades on the Toronto Stock exchange (the “TSX”) under the ticker symbols EHE (Hedged Units) and EHE.B (Non-Hedged Units).

WisdomTree is the trustee, manager and promoter of the ETF. Mellon Capital Management Corporation (the “Investment Advisor”) is the investment advisor to the ETF.

Investment Objectives and Strategies

The investment objective of the ETF is to track, to the extent possible, the price and yield performance of the WisdomTree Europe CAD-Hedged Equity Index (the “Index”), before fees and expenses. The Index is a fundamentally weighted index designed to provide exposure to dividend paying European equities while at the same time neutralizing exposure to fluctuations between the Euro and the Canadian dollar. The exposure that the portion of the ETF’s portfolio attributable to the Non-Hedged Units has to foreign currencies will not be hedged back to the Canadian dollar.

The investment strategy of the ETF is to invest in and hold a proportionate share of the constituent securities of the Index, or other securities, to track the price and yield performance of the Index. The ETF uses derivative instruments to hedge the foreign currency exposure of the securities attributable to the Hedged Units to the Canadian dollar.

Risk

No material changes were made which affected the overall level of risk associated with an investment in the ETF for the year ended December 31, 2017. The overall level of risk associated with an investment in the ETF remains as disclosed in the most recent prospectus.

Results of Operations

For the 12 months ended December 31, 2017, the Hedged Units returned 13.41% versus the Index return of 14.21%. The Non-Hedged Units returned 1.84% from their inception date of August 8, 2017 to December 31, 2017 versus a return of 1.99% for their benchmark Index, WisdomTree Europe Equity Index CAD. The difference in performance of the Hedged Units and Non-Hedged Units relative to their respective benchmark indexes is related to management fees and other miscellaneous factors.

The Eurozone equity market, as measured by the MSCI EMU Index, returned 12.63% in local currency terms and approximately 19.65% in Canadian dollar terms for the 12-month period ended December 31, 2017. The performance of the Eurozone equity market was strong throughout much of the period largely due to the Eurozone being at the forefront of synchronized global growth. Positive year-over-year corporate profit growth resulted in significant equity market gains. With market-friendly outcomes in elections in the Netherlands and France, coupled with the European Central Bank signaling that the eurozone economy may have reached a significant enough recovery that the central bank may begin to move away from extremely accommodative policies toward policy normalization. The two best performing sectors for the 12 months ended December 31, 2017 were industrials and technology, up 19% and 21% each in local currency, respectively. Conversely, one of the worst performing sectors was energy, up a modest 1.8% during the same period. This proved to be a tailwind for the ETF as the portfolio was underweight energy, relative to the MSCI EMU Index.

The Canadian dollar was driven lower by 7% relative to the euro as capital flowed to Europe thus spurring a broad based euro rally over the period. As such, the ETF’s currency hedge reduced some of the positive effects that unhedged portfolios experience when the local currency appreciates against the base currency of foreign assets.

RECENT DEVELOPMENTS

On August 8, 2017, the ETF listed Non-Hedged Units on the Toronto Stock Exchange. As required by National Instrument 81-107 — *Independent Review Committee for Investment Funds* (“NI 81-107”), WisdomTree has established an independent review committee (the “IRC”) to review all conflict of interest matters identified and referred to the IRC by WisdomTree and to give its approval or recommendation, depending on the nature of the conflict of interest matters. Anthony Cox was appointed to the IRC to replace Steven Rostowsky whose term ended on July 12, 2017. The current members of the IRC for the WisdomTree ETFs are as follows:

Name	Municipality of Residence
Karen Fisher ¹	Newcastle, Ontario
Gerry O’ Connor	Woodbridge, Ontario
Anthony Cox	Toronto, Ontario

¹ Chair of the IRC

Net asset value per unit	\$ 25.45	\$ 22.70
Closing market price	\$ 25.54	\$ 22.44

* Commencement of operations.

¹ This information is derived from the ETF's audited financial statements.

² Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the period.

³ Distributions were either paid in cash or reinvested in additional units of the ETF, or both. Reinvested units were consolidated.

⁴ This information is provided as at December 31 of the year shown.

⁵ The management expense ratio ("MER") is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period and is expressed as an annualized percentage of average daily net asset value during the period. MER includes the waiver or absorption of certain operating expenses by WisdomTree, while the MER before waivers or absorptions shows the MER prior to operating expenses being waived or absorbed by WisdomTree.

⁶ The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of average daily net assets during the period.

⁷ The ETF's portfolio turnover rate indicates how actively the ETF's portfolio manager trades its portfolio investments. A portfolio turnover rate of 100% is equivalent to the ETF buying and selling all of the securities in its portfolio once in the course of the period. The higher a portfolio's turnover rate in a period, the greater the trading costs payable by the ETF in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of the ETF.

PAST PERFORMANCE

The ETF's performance information shown assumes that all distributions made by the ETF in the periods shown were reinvested in additional units of the ETF. These returns do not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. These returns do not indicate how each class of the ETF will perform in the future.

Year-by-Year Returns

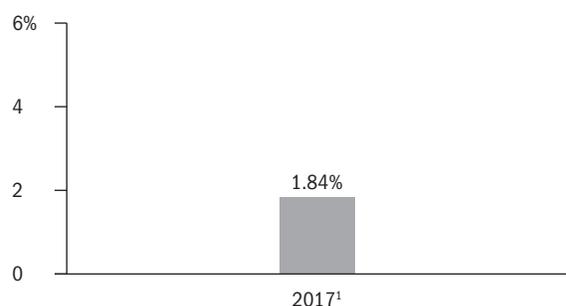

The following bar chart shows the performance of the ETF for each of the financial years shown. The chart shows in percentage terms how much an investment made on the first day of the period would have increased or decreased by the last day of the period.

Hedged Units

¹ For the period July 12, 2016 (commencement of operations) through December 31, 2016.
