Interim Management Report of Fund Performance

For the six-month period ended June 30, 2019

MANAGEMENT REPORT OF FUND PERFORMANCE

WisdomTree Asset Management Canada, Inc. (“WisdomTree”) is pleased to provide you with the Interim Management Report of Fund Performance (“MRFP”) for the ONE North American Core Plus Bond ETF (the “ETF”) for the period ended June 30, 2019. The ETF trades on the Toronto Stock Exchange (the “TSX”) under the ticker symbol ONEB. WisdomTree is the trustee, manager (the “Manager”) and promoter of the ETF.

Pursuant to an investment advisory agreement dated September 29, 2018 (the “OCM Investment Advisory Agreement”) between the Manager, in its own capacity and in its capacity as manager of the ETF and OCM, the manager appointed OCM as investment advisor for the ETF.

Investment Objectives and Strategies

The investment objective of the ETF is to seek to provide a stable rate of return, primarily through income, and to a lesser extent, capital appreciation by investing in a portfolio consisting primarily of investment grade North American fixed-income securities issued by corporations, governments (federal and state/provincial) and government-related entities and agencies through direct purchases and/or ETFs.

Risk

No material changes were made which affected the overall level of risk associated with an investment in the ETF for the period ended June 30, 2019. The overall level of risk associated with an investment in the ETF remains as disclosed in the most recent prospectus.

Results of Operations

The first half of 2019 was characterized by falling Canadian bond yields and strong corporate bond performance. Canadian 5- and 10-year government bonds rallied over the first half of the year with prices moving higher and yields moving lower. Continuing the trend from the first quarter, the ETF’s credit overweight helped to partially offset underperformance relative to the broad benchmark, which contains 65% Canadian government bonds. The ETF’s underperformance compared to the benchmark was due its shorter interest-rate duration stemming from a lower allocation to long-dated Canadian bonds in an environment where long-dated bonds enjoyed significant price increases.

The Bank of Canada (BOC) held the overnight target lending rate at 1.75% throughout the first half of 2019. Canadian consumer price inflation picked up in the second quarter, most recently registering 2.4% year-on-year in the month of May. If inflation continues to increase, it may make previously-expected interest rate cuts from the BOC less likely to occur. The ETF is positioned to provide safe and steady total return regardless of economic developments. In the month of June, the duration of the ETF was shortened slightly to provide additional protection in the event that long-term yields move back up from their very low levels on the back of higher inflation.

For the period spanning January 1 to June 30, 2019, the ETF returned 4.05% versus the FTSE Canada Universe Bond Index return of 6.52%. The difference in performance of the ETF relative to the benchmark index was due to the rally in long-dated Canadian Dollar (CAD) government bonds benefitting the higher interest-rate sensitivity of the Index.

The Bloomberg Barclays Canadian Aggregate Index returned 6.6% over the first half of 2019 while the Bloomberg Barclays Canadian Short Aggregate Composite returned 2.68% in CAD over the same period.

RECENT DEVELOPMENTS

There have not been any material changes to the management of the ETF. In 2018, WisdomTree published the investment risk level for each WisdomTree ETF, in accordance with the investment risk classification methodology prescribed by National Instrument 81-102 — *Investment Funds*. The ETF’s investment risk level may be found in the prospectus and ETF Facts.

As required by National Instrument 81-107 — *Independent Review Committee for Investment Funds* (“NI 81-107”), WisdomTree has established an independent review committee (the “IRC”) to review all conflict of interest matters identified and referred to the IRC by WisdomTree and to give its approval or recommendation, depending on the nature of the conflict of interest matters. The current members of the IRC for the WisdomTree ETFs are as follows:

| Name | Municipality of Residence |
|--------------------------|---------------------------|
| Leslie Wood | Pickering, Ontario |
| W. William Woods | Toronto, Ontario |
| Anthony Cox ¹ | Toronto, Ontario |

* Commencement of operations.

¹ This information is derived from the ETF's unaudited and audited financial statements.

² Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the period.

³ Distributions were either paid in cash or reinvested in additional units of the ETF, or both. Reinvested units were consolidated.

⁴ This information is provided as at June 30 and December 31 of the years shown.

⁵ The management expense ratio ("MER") is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period and is expressed as an annualized percentage of average daily net asset value during the period. MER includes the waiver or absorption of certain operating expenses by WisdomTree, while the MER before waivers or absorptions shows the MER prior to operating expenses being waived or absorbed by WisdomTree.

⁶ The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of average daily net assets during the period.

⁷ Amount represents less than 0.005%.

⁸ The ETF's portfolio turnover rate indicates how actively the ETF's portfolio manager trades its portfolio investments. A portfolio turnover rate of 100% is equivalent to the ETF buying and selling all of the securities in its portfolio once in the course of the period. The higher a portfolio's turnover rate in a period, the greater the trading costs payable by the ETF in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of the ETF.

PAST PERFORMANCE

The ETF's performance information shown assumes that all distributions made by the ETF in the periods shown were reinvested in additional units of the ETF. These returns do not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. These returns do not indicate how each class of the ETF will perform in the future.

Year-by-Year Returns

The following bar chart shows the performance of the ETF for the period. The chart shows in percentage terms how much an investment made on the first day of the period would have increased or decreased by the last day of the period.
