Credit Ratings represent the highest of each portfolio constituent as currently rated by Standard and Poor's, Moody's, or Fitch. Ratings are generally measured on a scale that ranges from AAA (highest) to D (lowest). Ratings from AAA to BBB are considered investment-grade. Effective Duration measures the responsiveness of a bond's price to interest rate changes and illustrates the fact that the embedded option will also affect the bond's price. Yield to Worst represented by the rate of return generated assuming a bond is redeemed by the issuer on the least desirable date for the investor. Yield to Maturity is the rate of return generated on these securities, assuming interest payments and capital gains or losses as if the instrument is held to maturity. Coupon is the annual interest rate stated on a bond when it's issued. Current Yield is a bond's annual return based on its annual coupon payments and current price.
